Installing the YOYO

IMPORTANT

When using Yoyo for the first time, the following alarm is likely to activate
`Ma18`   for machines equipped with the 2004 PCB, or
`Ma13`   for machines equipped with the 2007 PCB.

`Ma18 :`

italiano	english	español	deutsch
Versione modulo CAN	Version module CAN	Version modulo CAN	Version modul CAN

français
Version module CAN

`Ma13 :`

italiano	english	chinese	türkçe
Versione Sw YOYO non compatibile	Version Sw YOYO not compatible	版本 YOYO 不匹配	Versiyon Software YOYO imkansız

русский	español	français	deutsch
Версияе YOYO несовместима	Version Sw YOYO no·compatible	Version Sw YOYO pas·compatible	Version Sw YOYO Inkompatibel

On the machines equipped with a 2007 PCB the switch is positioned at the front.
In previous versions with a 2000 PCB or a 2004 PCB, the switch is positioned laterally.

The alarm indicates that the YOYO software is not compatible with the EPROM software, or vice versa.
If the Yoyos have been purchased together with the machine, you only need to configure them with the relevant file supplied.
If the Yoyos have been purchased separately, log on to www.Lonati.com in the Technical support section and download the Yoyo software, compatible with your Eprom version.
When the *.up file is available
activate Programming
1. load the file into the memory
2. and activate the file.
Operations can also be performed from the Alarm window: see attached instructions.

Management keys in the Alarm window

In the alarm window of pantyhose machines ("Donna") equipped with the **2004** PCB

| pressing key | [H] | you go to the | *Writing module Flash* | menu |
| pressing key | [F] | you go to the | *Reading file from disk* | window |

Follow the instructions on the next pages.

In the alarm window of all machines equipped with the **2007** PCB

pressing key   [Space]   you go to the   *Alarm menu*

Follow the instructions on the next pages.

Load and Activate a file .up from the Alarm window
for machines equipe with <u>PCB 2004</u>   3 / 4

Connect Fdu-2 / Fdu-3 to the machine.
Put in the floppy disk / the pen drive containing the *.UP file.
Refer to the table below for next operations.

1. **Load** the file in memory.

2. **Enable** the file.
   The machine will begin updating. It will automatically go off and then on again.

3. Wait for MA20 alarm*, then switch the machine off and then on again to start the new software.

N.B. The file *.up is cancelled automatically after activation.

Sequence of keys to load and activate the file .UP, starting from the alarm window

Update using FDU
